Document ID:1011999988

Memorandum: Do not bring exposed water near it.

Classification ☐ Omega ☐ Daemon ☐ Safe ☒ Recondite ☐ Beneficial

1 Specification

Subject 0027 is a shape-shifting entity entirely composed of H_2O . Its form is an extraordinarily malleable, liquid state which can maintain a contiguous solid like structure of any shape limited only by the amount of liquid material which constitutes S-0027. S-0027 is completely transparent and nearly colourless. S-0027's liquid state retains all the physical properties of water, but it's solid state has been observed to be much more resistant to penetration. All evidence points to S-0027's makeup being that of a non-Newtonian nature.

2 Containment Procedures

S-0027 must be contained in a 10m by 10m cell. No water or liquid substances should be present in the cell or 20 meters around it. The cell must be pressurised at a minimum of 20.5 atmospheres of pressure. No personnel are allowed in the containment cell without prior diving experience and a suitable pressure suit. The containment cell must be regularly inspected for signs of water damage and corrosion, and suitable maintenance should be done in case of extensive structural integrity failures.

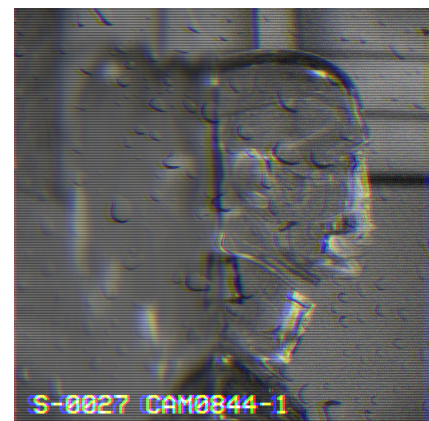

Fig. 1. S-0027 surfacing from a wall soaked in water. Captured in containment cell camera 1.

2.1 Recontainment Procedures

In the case of a containment breach, a vibrational recontainment implement must be penetrated into S-0027 to immobilise it. It can then be returned to its containment cell via a suitable liquid transfer vessel.

3 Behaviour

Behavioural Assessment 1 S-0027 seems to be able to de-materialise and re-materialise in any water-based substance within a few metres of its exit point, where it leaves water corrosion at said point. This corrosion appears to be anomalously fast, inflicting years of water corrosion on a material in seconds. C-0583 placed a bucket of water in S-0027's containment cell. It began to interact with the fluid inside the bucket, disappearing into thin air while simultaneously emerging from the fluid. We observed the bucket to later have significant rust on the inside, much more than anything could cause in the small time frame of the experiment. The exit point of S-0027 experienced significant water corrosion also. **[ADDITIONAL LAB TESTING NEEDED]**

Behavioural Assessment 2 We repeated the previous assessment, but with the addition of a wall in between the S-0027 and the bucket. S-0027 was unable to transfer itself into the bucket, even if the wall was replaced with glass. This suggests S-0027 is unable to transfer itself by passing through objects, i.e., there must be air in between it and its target. **[ADDITIONAL LAB TESTING NEEDED]**

Behavioural Assessment 3 We experimented with containment cell pressurisation. Repeating the experiments above, we have learned that S-0027 needs a line of sight of air between 1 atmospheres to 0.5 atmospheres of pressure. 1 and above and it loses its range significantly, completely losing its ability to transfer its form at 30 atmospheres. **[ADDITIONAL LAB TESTING NEEDED]**

Behavioural Assessment 4 Head Command requested the research team to experiment with human subjects. We placed C-0583 and C-6643 into the containment cell, with an additional guard equipped with an air tight hazmat suit. They were requested to approach S-0027. C-0583 refused and was immediately shot. C-6643 began to comply. S-0027 started to re-materialise in C-6643, converting C-6643 into an instance of S-0027-1. S-0027-1 appeared to be completely identical to S-0027, exhibiting much of the same behaviour, although appearing to struggle in the process of locomotion. S-0027 was unable to convert C-0583's corpse into an instance of S-0027-1. It is not known why this was not possible due to the lack of knowledge in the mechanisms of this process. It is theorised, however, that S-0027 re-materialised in the sweat of C-6643, at which point it had easier access to the rest of C-6643's body. S-0027 was able to recombine with S-0027-1, increasing its local mass. It is unknown whether there is an

upper limit to S-0027's mass or how many bodies it can convert. Additional experiments are needed. [FURTHER TESTING DENIED]

4 Origination

Fig. 2. Lastest image of Psi Dynamics Surface Entrance taken by SIIS field team 17.

S-0027 was recovered from the Psi dynamics [See GOSI-PD] during incident 0027-a in which an experiment with hydromatic infusion went wrong, causing S-0027 to be born. S-0027 immediately began attacking Psi Dynamics scientists and staff before exiting out of the air duct, which is exposed to the surface. It then began to make its way to the a village north west of the Psi Dynamics facility and began a mass homicide, turning residents of the village into S-0027-1. It was at this point the corporation took control, due to S-0027 not being within Psi Dynamics control. This gave the corporation the ability to capture S-0027 without resistance from Psi Dynamics [See addendum 1]. S-0027 was captured using a vibrational device which interfered with its liquid constitution and rendered it immobile. S-0027 was then inserted into a recovery device (a pressurised tank) which also vibrated at the same frequency as the capture device. The tank was carried by former Alpha Squad commander Luke Greeves.

5 Postscript

5.1 Addendum 1

What follows is the debrief given by Alpha squad commander Luke Greeves to Field Operations Supervisor Dr. Reimers after the successful capture of S-0027. Dr. Reimers at this point in time had temporarily been stationed at Facility 10 before the Russian Kirov Breach [See addendum 2].

[START OF TRANSCRIPT]

[15/01, 09:17] Dr. Reimers: Start from the moment you arrived at the rendezvous point.

[15/01, 09:17] ASC. Luke Greeves: Ok. When we arrived at the drop off location I ordered the squad to form up by the back of the church building. The surveillance team had pinpointed S-0027's location to a private field one klick south of us. The extraction point was to be directly at the location of S-0027, once it was apprehended. We moved silently down the main road, single file, keeping in the shadows. Once we were in range of the subject, we deploy-

[15/01, 09:18] DATA UNRECOVERABLE

[15/01, 09:24] ASC. Luke Greeves:-to the back garden. S-0027 was standing their in center of the field, completely still. The squad moved into a circle formation as we closed in on S-0027. S-0027 reacted violently turning Lt. Keyes into one of those...things. Our gunfire was futile, unable to cause any discernible damage to S-0027 or any of its extensions. They however did slow them down giving me time to retrieve the sonic device from my backpack. As S-0027 combined itself into one complete being, I took this as my only chance to strike, and stuck that thing into that bastard. It seemed to react extremely negatively to the sonic implement, becoming entirely immobile. It was then I was able to retrieve the sonic encapsulation device which extracted S-0027 successfully.

[15/01, 09:26] Dr. Reimers: Thank you. End Report.

[END OF TRANSCRIPT]

5.2 Addendum 2

The Russian Kirov Breach was a breach which occurred on the 28th of January 2005, in which multiple Daemon level subjects breached containment and escaped Facility 10. 3

small towns in the areas surrounding Kirov Oblast were affected, requiring extensive amnestic campaigns...[See GOSI-AI]
