Memorandum: Stay away, at all costs

Classification ☐ Omega ☐ Daemon ☐ Stuia ☐ Safe ☒ Recondite ☐ Beneficial
Recontainment Measures ☐ Apokulupto ☐ Extensive ☐ Minimal ☒ Non-applicable

1 Specification

S-0133 is a phenomenon that affects lifts, giving temporary access to S-0133-D - a dimension located spatially between random floors accessible by the lift. The affected lift appears unremarkable from the outside and its true nature only becomes evident when it is utilised.

S-0133-D is a space that bears a similar resemblance to the conventional floors it lies between. It reportedly changes appearance depending on the lifts location. Upon entering the affected lift and selecting a floor, individuals unwittingly initiate S-0133's unique characteristics. The lift travels directly to a IBC-1 Class 'Infinite Bounded Negative Curvature' bubble universe, designated S-0133-D. Once the lift doors close, there is no way to keep in contact with the outside world until the same lift is affected again.

Fig. 1. A lift, affected by S-0133, located in Facility 36

2 Containment Procedures

It is not known how S-0133 jumps from lift to lift, or whether this is its vector mechanism, and therefore containment procedures focus on readiness and response rather than confinement.

In the event that an individual becomes trapped within a lift affected by S-0133, they should not leave the lift under any circumstances while in S-0133-D. While a public briefing is not possible due to the sensitive nature of anomalous activities, security personnel should monitor lifts on site, detecting abnormalities in lift behaviour or reports of prolonged lift journeys. Once confirmed, the immediate area around the lift should be cordoned off, and a response team should attempt to call the lift to a conventional floor within the facility.

These teams should be trained to provide reassurance and support to those within the affected lift, ensuring that they understand the unique temporal and spatial predicament they are experiencing. Any personnel below Orange Clearance Level should receive a full mind erasure, while higher level staff may request psychological and emotional care if necessary. Alternative approaches to minimising the impact of S-0133 can include replacing lifts with viable stair alternatives where possible.

3 Behaviour

S-0133 has never been observed under laboratory conditions. The unpredictable nature of its reported contamination of lifts worldwide leaves small windows of time, usually of only a few minutes, where a lift gains the ability to travel to S-0133-D. This short timeframe, along with the sporadic temporal nature of events, makes repeating experiments infeasible, and therefore current Behavioural Assessments have provided limited information.

S-0133-D's reported likeness to the floors of the building it affects can cause confusion for building occupants, unaware of the phenomenon. Inadvertently entering the affected lift and leaving the lift on a familiar-looking floor is hypothesised to be the reason behind a small proportion of missing persons reports worldwide. Likely within the range of 10 to 100.

Behavioural Assessment 1 An experiment for S-0133 was set up at Facility 36. Staff operating all lifts within Facility 36 were given overlapping shifts, to constantly use lifts to random floors in the hope that S-0133's influence would arise. After 35 days of 24/7 monitoring on site, intern Ms Cooper and line manager Mrs Puki, a Green Clearance Level holder, found themselves on an affected lift. Between the 2nd and 3rd floor, both members of staff found the lift doors open unexpectedly early.

On realising their situation, Mrs Puki set off a remote alarm and was able to get in contact with Site Director [REDACTED] using the provided comms unit. An on-body camera worn by Ms Cooper showed Mrs Puki taking air samples and collecting samples for later analysis as directed by Site Director [REDACTED].

After 32.3 seconds from first external contact, the lift was heard to chime, and the doors crashed together at an abnormally fast speed, trapping Mrs Puki within S-0133-D, and crushing and amputating the outstretched arm of Ms Cooper who was holding the lift door. Communication between Site Director [REDACTED] and Mrs Puki ceased at the same moment.

Attempts to get back in contact with Mrs Puki require further funding and permission.
[REQUEST APPROVED]

Behavioural Assessment 2 A rescue attempt to recover Mrs Puki was undertaken in the aftermath of Behavioural Assessment 1, to further expand knowledge on the behaviour of S-0133. The lift which had entombed Mrs Puki in S-0133-D was put under constant surveillance, along with other lifts within Facility 36. Approximately 2 months after the initial encounter, the same lift was affected by S-0133. On board was Dr Spenny, who was able to locate Mrs Puki's body and drag her back into the lift.

Mrs Puki was shortly after declared dead, with an autopsy declaring that her death was related to severe dehydration. On her person, Mrs Puki had written notes on her observations and experiences in a personal diary. **[See addendum 1]** Her on-body camera was retrieved but had been wiped, with the data deemed unrecoverable.

With such a low probability of S-0133 affecting the same lift twice in a relatively short time span, it is thought that S-0133 has a preference for certain lifts over others, but further testing is required. **[FURTHER TESTING APPROVED]**

4 Origination

The earliest authenticated and reported encounter with S-0133 were the events that transpired in Behavioural Assessment 1. The true origination of S-0133 is unclear with no credible sources stating different. However, it is believed that S-0133 has been around long before the Corporation was able to document it, possibly dating back to around the early 2000s. Efforts to uncover its origin have led researchers to hypothesise that S-0133 might be a side effect of experimental technologies conducted by undisclosed organisations such as the "Anarchy Insurrectionists" **[See GOSI-AI]**. Others speculate that there is a physical entity that creates a connection between S-0133-D and the real world. The lack of concrete evidence or a consistent pattern has made it challenging to validate any one theory.

5 Postscript

5.1 Addendum 1

That which follows is an extract from Mrs Puki's diary entry, during her time trapped within S-0133-D. The actual diary is kept on-site at Facility 36 in memoriam.

..it's not often that you are faced to contemplate with your own mortality. I knew the associated risks with my job, but you always believe it'll happen to someone else, never yourself. I've always been quite reserved, and enjoy the peace and quiet, but something about this place gives me the chills. It's hard to describe, but it feels like there's something

here with me, listening to my breathing. It's just too quiet. I see dark areas in my peripheral vision sometimes and turn quickly to see nothing. Funny. I'm probably going mad already and it's only been 2 days. It doesn't help that making any noise at all worsens the feeling of being observed.

There should be people directly above and below me right now, but I can't hear a thing. In fact, forget above and below. They should be located directly where I am right now. This must be a different dimension, or a teleportation to another location entirely. Regardless, the lift door has been wedged tightly shut, and my efforts to break through a window have been bested by the fact that there aren't any windows here - just curtains placed over a brick wall. The brick walls are just as sturdy as you'd expect... it's like a corporate prison room... but an imitation of the real thing, the furniture is all there, and at face value, it looks normal enough, but pull back the facade and you notice the irregularities. For instance, in the filing cabinet, every seventh drawer contains a flashcard with the number 17 - why? I haven't a clue. All the chairs are made of a sticky goey material that collapses on sitting and reshapes itself. All the pencils are just blocks of wood, and the erasers are just blocks of hard plastic-like material.

Did I mention the fact there's a CCTV camera that tracks my movement as I walk around? I strapped a piece of paper from this diary onto the lens to block it, but it still follows me around perfectly. It's a sick joke, is there even anyone on the other side of that camera? Is the camera just another illusion? Weirdest of all, there aren't any lights, yet the whole room is illuminated perfectly. You normally don't appreciate shadows but it really makes the whole place feel uncanny, not a single shadow in sight.

I don't know how long I'm going to be able to last here. I'm trying to stay calm but deep down it just feels like I've already lost. My headaches really badly, and my emergency rations of food for this very scenario seem inadequate with hindsight. I think I can last it out for a few weeks perhaps, that's if I don't lose my mind before then. Worse comes to worst, I suppose there's always ██████'s [Ms Coopers] arm, but I'd rather not. I'm more worried about water supplies.

"At some point in your childhood, you and your friends went outside to play together for the last time and nobody knew it". Maybe that's just what happened to me, I flew too close to the Sun for far too long. I hope ██████ and ██████ are doing ok, what I wouldn't do to talk to them again one last time. There's just so much that has been left unsaid.

That'll do it for today diary, need to conserve energy and lay low. Who knows?
Maybe that lift will open its jaws in 5 minutes...
