Memorandum: Stay away, at all costs

Classification ☐ Omega ☐ Daemon ☐ Stuia ☐ Safe ☒ Recondite ☐ Beneficial
Recontainment Measures ☐ Apokulupto ☐ Extensive ☐ Minimal ☒ Non-applicable

1 Specification

S-0038 is a opaque dark mineral crystal which presents a varying range of colors from a burnt orange to blood red. S-0038 most common color is that of a deep reddish hue, with a rare instance of S-0038 being almost completely orange. S-0038, barring its anomalous properties, has exceptional fire retardant abilities.

2 Containment Procedures

S-0038, due to its beneficial classification, has no explicitly assigned containment procedures. Due to the unlikelihood of the event that activates S-0038 anomalous properties, S-0038 has been designated safe for all modes of unrestricted transportation; barring experimental cases and high-risk/ high fatality prone environments. S-0038 transportation outside of the Corporation's facilities grounds remain strictly monitored however, and in most cases denied all-together.

Fig. 1. Excavated chunk of S-0038 lying on top of the salt flat.

3 Behaviour

If any organic life with an apparent surface area to volume ratio lower than 6 dies within a 20 to 30 meter radius of S-0038, all instances of S-0038 will begin to duplicate their atomic structure, creating an arbitrary duplicated mass of S-0038. This duplication seems to be approximately double the original mass of the duplicants, but has exceeded this up to 10 times according to historical experimental data. S-0038 when enclosed in a space in high quantities can create a suffocation hazard. This can result in a severe negative feedback loop due to the death of organic life causing S-0038 to duplicate, only increasing its asphyxiating effects. However, the quantity of S-0038 needed, combined with a near airtight seal the enclosing room requires for S-0038's asphyxiating effects to appear suggest a low threat from this behaviour. However it is mandated that appropriate warning labels are displayed of all storage units containing S-0038.

4 Origination

Fig. 2. The extensively excavated salt flat and underlying "mineral field" containing copious amounts of S-0038.

Figure 2 is a photo taken by field researcher John Larmack after extensive excavation by the Corporation. S-0038 was discovered on the 9th of May, 1985 hidden under a few centimeters of uniform white salt stretching ■ square miles, located at ■ Minnesota, now designated Site-038 Delta Charlie. S-0038 was initially logged by the Corporation when a Micheal Gheal, a prolific serial killer, accidentally dug up S-0038 when attempting to bury his 5th victim

██████████. The serial killer mistakenly discovered S-0038's anomalous effects when he presumably took a sample and left it in his car. This resulted in his death and a missing persons report was issued for him and his victim a few hours later. His location was pin pointed down to the salt flat by his telephone service provider. The Corporation soon intercepted and took over the investigation once the anomalous cause of death began to be uncovered.
