

# Anomalous Entity Report

## "The Lightning Weapon"

### Subject 0021<sup>1</sup>

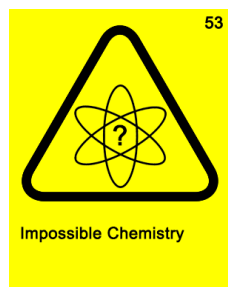

<sup>1</sup>Department for Classification of Non-typical Phenomena

641 Words

Document ID:9456035

**Memorandum:** Stay away, potential benefit

**Classification** ☐ Omega ☒ Daemon ☐ Safe ☐ Recondite ☒ Beneficial

## 1 Specification

S-0021 is a type of club, known as a Vajra, a ritual weapon, about 30cm in length. It is made of solid gold, with engravings marked throughout, as well as jewels. It is paired with a ritual bell that priests were thought to ring during rituals in the early ██████████. This bell is insignificant and is considered nothing more than ordinary.

**Fig. 1.** An image of Subject 0021

## 2 Containment Procedures

Subject 0021 is an inanimate object, and as such, there are no physical barriers needed. However, due to this objects special ability of siphoning lightning itself, it should be stored in a non flammable area and away from sensitive areas of the facility. Regardless of how far away from the outside this object is kept, lightning always strikes as close to it as possible.

## 3 Behaviour

While previously thought to attract weather to itself, it appears through testing that this object has a permanently high density of positively charged protons. This causes electricity to be attracted to it from extreme sources.

**Behavioural Assessment 1** Subject 0021 was unresponsive during our first testing. When put next to an electricity source (a cell), its effect of taking power from the cell was negligible. [FURTHER TESTING APPROVED]

**Behavioural Assessment 2** Subject 0021 is considered responsible for a barrage of over one-hundred lightning strikes directly above where the testing laboratory was. While it could be coincidental, further testing is not advised[FURTHER TESTING NOT ADVISED]

## 4 Origination

Fig. 2. An image of the discovery location.

Found in the depths of the Bermuda Triangle by divers, shown in Figure 2, this anomaly is considered responsible for the mysterious disappearances of aircraft and ships. Its behaviour whilst not understood, seems to attract electricity to itself. It is considered the primary cause of the violent weather found in the Devil's Triangle. Subject 0021 has been given to this facility due to the old facility area being ill-prepared for its affects, and subsequently burning it to the ground. More on this is mentioned in 5.2.

## 5 Postscript

### 5.1 Addendum 1

What follows is an extract of a debrief given by scientist [REDACTED] to Head of Research Dr. Murphy.

[START OF TRANSCRIPT]

[25/06, 12:05] **Dr. Murphy:** Thank you for taking the time to speak with me today. It is a known fact that you are an expert on this object in particular?

[25/06, 12:05] [REDACTED]: That would be correct, yes.

[25/06, 12:06] **Dr. Murphy:** Could you please summarise what makes this anomaly in particular dangerous?

[25/06, 12:06] [REDACTED]: Most anomalies we have are "dangerous" as you say, but describing this anomaly that way wouldn't be doing it justice, it's potential is awe-inspiring.

[25/06, 12:06] **Dr. Murphy:** So, what is the conundrum about this artifact?

[25/06, 12:06] [REDACTED]: It's when there is high surges of electricity that this object comes into it's own. Whilst it appears harmless usually, its unique behaviour can be seen most commonly during storms where, put simply, lightning jumps to itself, causing mass damage in its wake. It's of the utmost importance that this is handled with care. However, whilst dangerous, it has potential to be extremely useful. We've effectively found an object that can manipulate the weather to our advantage!

[25/06, 12:07] **Dr. Murphy:** Thank you for being on the record, [REDACTED]

[25/06, 12:07] [REDACTED]: It's my pleasure.

[END OF TRANSCRIPT]

## 5.2 Addendum 2 - Incident 0021-a

This anomaly is responsible for the destruction of facility 13, after only being at the facility for less than a few hours, and before it was properly researched. In less than an hour, the facility was burned down from 100s of lightning bolts hitting the facility during a thunderstorm. There are at least 50 fatalities associated with this event alone, described by bystanders as a true freak of nature. It can be noted as well that since this object has been taken from its place in the Bermuda Triangle, that weather has been observed to be much more calm in the region.
